Xanté introduces the X-121 to its line of Adobe PostScript UV Flatbed Printers

Mobile, Ala. – Xanté proudly announces the release of its largest UV flatbed printer to date. The Xanté X-121, with a 5'x10' full-bleed imaging area, amazing color quality, and high production speed sets a bold new standard for direct-to-substrate printing. This next generation X-Series UV flatbed printer will be featured in Xanté's booth #1513 at PRINTING United Expo, October 22–24, at the Orange County Convention Center in Orlando, FL.

Building on the industry success of the X-98, the all-new X-121 delivers unmatched output capacity and creative flexibility. Its expansive 5'x10' bed supports up to fifteen 18"x24" yard signs at once, dramatically boosting throughput while slashing turnaround times. Despite its impressive size, this engineered, smart, compact design fits through any standard doorway – making installation possible, even in tightest of workspaces.

At the core of the X-121 are dual or quad Epson i3200 four-channel printheads (CMYK) and (WWWW), delivering rich, vibrant color and precise detail on virtually any substrate – including wood, glass, stone, metal, acrylic, vinyl, coroplast, paper, and more. With a 3-inch maximum print head height, it easily accommodates thicker media types.

Debuting alongside the X-121 is the release of iQueue® 17, Xanté's most advanced version of iQueue yet. This powerful upgrade puts unmatched control in the hands of operators, offering streamlined management of print quality, layout, spot color matching, ADA-compliant braille, white ink effects like frosting, multi-panel designing, and real-time job costing. iQueue 17 is designed and engineered in the USA, including intelligent AI color matching, and is always included with every Xanté printer at no charge and free of any maintenance or yearly subscriptions.

"The X-121 is more than an upgrade, it's a declaration," said Robert C. Ross Jr., President and CEO of Xanté. "It's built for shops that are serious about growth. We've combined the size, speed, and quality our customers demand."

Key Features of Xanté X-121 Include:

- A 110V operation with powerful dual 220V vacuum pumps for stable, secure media placement during printing.
- Multi-purpose jig included for seamless printing on golf balls, baseballs, pop sockets, and more.
- Xanté UV Unlimited Technology™ for printing on curved and cylindrical surfaces, like cups, mugs, and bottles — that hold up through countless dishwasher cycles.
- Optional roll-fed attachment with multi-use cutter for precision cutting of roll media such as vinyl, paper, and more.

The Xanté X-121 will be showcased live at Booth #1513 during PRINTING United Expo. Attendees are invited to experience its power, precision, and print versatility firsthand — and see why Xanté continues to lead the future of UV flatbed printing.

Xanté X-121 UV Flatbed Printer Pricing
